

Financial Information Technology

Financial Information Technology

Financial Information Technology was established in 1993 with the purpose of providing quality business software and related services to small to medium sized businesses.

FIT provides solutions to customers where entry-level accounting software does not meet requirements but who can not justify the budget, time and resources required for large ERP systems.

Our customers cover a variety of business types but they typically want something 'more' - whether it be detailed financial reporting or a specific business process that is not delivered by other systems within their budget.

Business Software Solutions

Financial Information Technology is an accredited systems integrator for:

- Sage Line50 Business Software
- Sage Line100 Business Software
- Sage-Pastel Evolution Business Software
- Sage-Pastel Partner Business Software
- HR3 Payroll
- Winpay Payroll

Related Services
